READ ME

This project is built on python 3 and depends on following packages:

1) spacy [displacy, Matcher]
2) json
3) neuralcoref
4) numpy
5) nltk [sent_tokenize, wordnnet]
6) sys

In order to run this project, please go to the project directory where the python file is present. Then use the following commands

For Task 1:

~ python Task1.py [file.txt]

For Task 2:

~ python NLP_project.py [file.txt]

Note: Here file.txt is the input file name

All the outputs of Task 2 will be stored in the json file, which will create by the program. For Task 1 some outputs are shown in the terminal and some will be stored in the text file generate by the Task 1 program.
